

What is T-PACK?

T-PACK is the future of education. Teaching has always been a combination of **pedagogy**, teaching methods, and **content knowledge**, subject matter. T-PACK simply adds **technology** into the equation.

Therefore,

Technology +

Pedagogy +

Content Knowledge = T-PACK

The goal is to use the proper technology to drive the curriculum. We must try to overcome the fear and uncertainty of technology to reach a new audience of students.

We pity the fools who don't follow the T-PACK model.

We love it when a plan comes together

T-PACK

Brought to you by

What is T-PACK?

Why is T-PACK needed?

How do I use or implement T-PACK?

How can T-PACK help me in my content area?

The **A-Team** has the answers

Why is T-PACK needed?

“Ever notice you run into the nicest people in education?”

T-PACK provides understanding for becoming an effective teacher in a technology heavy environment.

With technology being provided in our classroom we need to be given access to ways to be effective with those specific technologies given to us.

Education is becoming more technology oriented; and although sometimes overwhelming learning to adapt to using technology will help our students in the 21st century.

How do I use or implement T-PACK?

“Use your imagination... or you can borrow mine.”

Using T-PACK now is great because it is always evolving. There are so many different ideas, techniques, and methods that teachers can use to show their students the content that you are passionate about, but at the same moment teach content in a way that captivates your students.

Because T-PACK covers so many areas, teachers are encouraged to use their preferred methods of education but expand those methods with technologies that are at your ready disposal.

Our hope is to offer our services on a continual basis, this is not a learn and burn PD Day, instead this is a commitment to seeing this implementation fully through. We want to work around teacher schedules to help learn the technologies and provide ideas and / or lessons to aid in the T-PACK implementation process.

Check out our website for tutorials on current technologies available in our schools.

Always remember your knowledge and methods drive the course, but technology simply enhances your lessons.

How can T-PACK help me in my content area?

“If you’re tryin’ T-PACK, then we are stylin’.”

You are right, it seems like all we do as educators is cater to our students. However, technology can be beneficial to both teacher and student.

Technology makes content easier to find.

Students can be allowed to lead their own learning.

Allows a teacher to expand their methods to add creativity and ease of implementation.

The school has software available to all teachers and students

The school has hardware available to all teachers and students

Web 2.0 tools varying in content and purpose and most are free.

Be the first to challenge students with a new technology and watch them succeed.
